FOR UNIVERSITIES AND
UNIVERSITY COLLEGES

Academic Software

Digital tools for schools

All the digital tools schools need for education offered by one partner

Academic Software, by Signpost, is the go-to online portal for the digital needs of schools and students. This one-stop software portal gives staff, teachers, and students of affiliated educational institutions access to high-end and up-to-date licenced software and learning platforms with annual fixed fee.

No more searching for the right application or platform, or uncertainty about which version is the latest: Academic Software has got it covered! The platform is accessible via Single Sign-on, which means users only need their school account to have access to all software in one place. They can then legally install the software on their own laptop, or launch it in the Cloud Player, so no installation is needed.

Customisable for each curriculum

The portal is customisable to fit any specific curriculum, including non-IT-related educational programmes. In collaboration with universities and university colleges, software packages are customised to meet the needs of the educational programme.

Multilingual support

Academic Software provides clear step by step manuals to guide students through each software installation and/or activation process. Still need help with installation or support? Our multilingual helpdesk is available for students and institutions by mail, phone, chat and remote desktop, both during the academic year and the holidays.

Single fixed annual fee

All software licences are included in Academic Software, same as for the multilingual helpdesk. The use of the platform is charged annually directly to the school, based on the number of students and any specific software choices. Due to economies of scales prices are advantageous for the school and the students.

Students have access to all software on one platform

Teachers can rest assured that students have installed the latest version correctly

ICT coordinators can manage all licences on one platform

Multilingual manuals on the platform and helpdesk available all year round

Cloud solutions

While technology is evolving rapidly and expectations are high, the time available for ICT coordinators is scarce. Therefore time-saving solutions like Academic Software and Cloud solutions are becoming increasingly important. Within Academic Software the following Cloud solutions can be included as optional add-ons.

Studentcloud

Cloud tools without unexpected costs or IT headaches

Academic Software Studentcloud is an orchestration tool developed by Signpost. It allows schools and ICT coordinators to effectively manage costs by offering a managed and measurable way for students and teachers to exchange credits for Cloud tools, virtual machines and desktops in Azure.

Microsoft Azure Cloud

With Azure, everyone is on cloud nine!

Microsoft Azure helps schools to bring server workloads to the Cloud. Microsoft Azure offers many advantages over local servers: it is safer, easier to manage, easier to scale, more affordable and always up to date.

Signpost guides schools through the migration to Microsoft Azure Cloud. Our specialists will conduct a free audit at the school to investigate what can be migrated to the Cloud, assist with the step-by-step transition and provide support for Cloud services. Free Azure Cloud training days are offered via Signpost Academy.

Want to know more?

Sometimes things may seem very obvious to us, but they raise questions or ambiguities with you. We gladly provide you with more information about our efficient and time-saving digital tools.
